

Supplementary Figure S3

WGCNA Network Visualization for a Topology Overlap Measure (TOM) > 0.13. Yellow nodes corresponds to deregulated genes in MC and SMC compounds. Other nodes are colored according to modules identified by the WGCNA.
(a) Network visualization for genes up-regulated by MC compounds. (b) Network visualization for genes down-regulated by MC compounds. (c) Network visualization for genes up-regulated by SMC compounds. (d) Network visualization for genes down-regulated by SMC compounds.
